

Wrrapd — Jacksonville / Duval Beta Launch

Master Readiness Review

Prepared: Saturday, October 3, 2026 (updated the same evening with Roger's answers, then again late Oct 3 after the fixes in §1.3 and §1.4 shipped)

For: Roger (founder, first WrapRider, Flight Director)

Scope: Whole business and whole application — shopper site, Chrome extension, pay server, Command Center, contractor apps, hire funnel, hub/PO Box logistics, hardware, data/media architecture, legal, insurance, tax.

Status: INTERNAL. Never publish any part of this document. It contains pay mechanics, routing, and security findings.

ALL SYSTEMS — GO / NO-GO

How this was built: a read-only audit of the full monorepo (extension/, backend/wrrapd-api-repo/WrrapdServer/, tracking-platform/, wordpress/, docs/), plus live checks on Oct 3, 2026 against wrrapd.com, apply.wrrapd.com, pros.wrrapd.com, api.wrrapd.com, the Cloud Run service, Firestore, Cloud Storage, Cloud Scheduler, PM2, and the VM firewall. Evidence is in Exhibit C.

Status legend used everywhere:

Mark	Meaning
GREEN	Built, working, verified or low risk
YELLOW	Works, but needs manual workaround, configuration, or proof by a test
RED	Launch blocker — must be fixed or consciously waived before Go
GREY	Not built; acceptable to defer for beta if a manual SOP covers it

Contents

1. Executive assessment — how close are we?
2. Business model review (with business-judgment notes)
3. System-by-system readiness review (17 systems)
4. The architecture question — "Will we hit an Uber-style wall?"
5. Hardware & kit program + Command Center Equipment module spec
6. SOPs — what exists, what must be written before launch
7. Timeline — phases and dates to public beta and through the holidays
8. **Exhibit A — Master Pre-Launch Checklist ("All Systems — Go/No-Go")**
9. Exhibit B — Questions for Roger
10. Exhibit C — Evidence captured on Oct 3, 2026

1. Executive assessment

1.1 Bottom line

We are not "Go" today, but software is nearly there and operations are about halfway. (Updated Oct 4.) The shopper-facing software (extension, pay page, Duval ZIP gating, Command Center order flow, hub intake, refunds, admin logins with codes, wrap shift recording, delivery photos, contractor pay, backups, monitoring) is about **85% ready** for a controlled beta. The physical operation is about **55% ready**: the tools for receiving packages at the hub, wrapping on video, and proving delivery are built, but none has been run end to end with a real order yet, and insurance (R9), the delivery-cost decision (R10), carrier test shipments (R1), hardware kits, and the first hires are still open. Sales tax (R8) is closed. Operations reaches 80%+ after the first dress rehearsals pass.

Realistic path:

Milestone	Target date	Condition
Blockers fixed ("Stabilize")	Sun Oct 11	All RED items in §1.3 closed or waived
Internal dress rehearsals (Roger buys real gifts to friends)	Oct 12 - Oct 18	10 end-to-end orders, zero unexplained failures
Friends-and-family closed beta	Oct 19 - Nov 1	Invite-only, cap 5 orders/day
Public Duval beta launch	Mon Nov 2 (fallback Mon Nov 9)	Go/No-Go poll Fri Oct 30 passes
Holiday peak	Fri Nov 27 - Thu Dec 24	At least 1 trained backup WrapRider/JoyRider by Nov 20

Launching publicly before Black Friday matters: it gives us ~3 calm weeks to find the failures before volume arrives.

1.2 What is genuinely strong

- **Duval ZIP gating** is live (34 ZIPs) and shown to shoppers before they invest time.
- **Amazon flow** is the most mature path and was frozen as golden on Sep 19.
- **Server-side repricing** exists for the Helcim path (the server, not the browser, decides most of the charge).
- **Command Center** has a real order lifecycle, auto-allocation within 15 miles, an allocation approval board, wrap shift recording with video, signed QR box labels for couriers, a public tracking page, a Twilio service desk, **\$30/dozen wrapping pay** (WrapStar / WrapRider) plus Amazon Flex-style planned-route delivery pay, weekly Stripe Connect payouts on a Thursday scheduler, annual 1099 statements, and electronic Form W-9 onboarding.
- **Hire funnel** has three separate tracks with apply forms, fit scoring, clickwrap agreements, and Command Center review.
- **Media design is fundamentally right**: photos and videos go to object storage with only a pointer in the database. That is the single most important decision for avoiding the "Uber wall" (see §4), and it was made correctly.

1.2a Decisions log

Date	Decision	Effect on this plan
Oct 3	Hub = USPS Premium PO Box with Street Addressing: WRRAPD INC, 150 BUSCH DR #26067, JACKSONVILLE FL 32218	Coded in extension 3.0.12 (all 10 retailers) + server hub detection. Old "PO BOX 26067" still recognized. Remaining: CWS publish + carrier tests (HUB-01/02)

Date	Decision	Effect on this plan
Oct 3	No Wrrapd code on the shipping label — match by packing slip	Retailer order # capture is mandatory (R2)
Oct 3	All 10 retailers live for beta	EXT-19 per retailer; per-retailer off switch (EXT-20)
Oct 3	Wrrapd Inc. is a C corporation ; registered with Florida DOR; 2026 Florida Annual Resale Certificate on file (expires Dec 31, 2026); Roger files sales tax annually and has done so every year	R8 closed (GREEN)
Oct 3	Free final delivery stays for now	\$2.3 A remains a watch item; revisit with beta data
Oct 3	No daily order cap	CC-06 becomes a pause switch (not a cap). Kill switch EXT-21 still required
Oct 3	Flowers stay ON (integral to the offer)	Flowers move from "recommend OFF" to a RED fix item (see System 17)
Oct 3	Contractors borrow a Wrrapd kit and return it	\$5 option 3. Equipment agreement + return flow required before first hire; counsel review of IC impact
Oct 3	High-value threshold \$100	No safe-drop above \$100; hand to an adult at the door (SOP-07, DEL-09)
Oct 3	Provisional patent 64/159,570 filed Sep 22, 2026 (confirmation 3565)	LEG-10 done. Provisionals are never published or examined — not finding it on USPTO search is normal. Non-provisional / PCT deadline: Sep 22, 2027
Oct 3	No backup person for Roger assumed	If Roger is unavailable on a delivery day: pause new orders, contact affected shoppers. Optional "Backup buddy" question added to WrapRider + JoyRider applications
Oct 3	Micro-hub = the PO Box only (no separate facility; no camera)	HUB-10 changes: held packages live at Roger's wrap location; wrap video is the chain-of-custody record
Oct 3	Helcim: all signals green, not yet tested live	PAY-01 must include one real live charge + refund with Roger's own card before beta
Oct 3	All 210 VM orders are dummy orders	Clean up and make order numbers realistic + consistent (pending format choice)
Oct 4	Never miss an order. Every order shows under Orders, with or without a WrapStar ("Needs staffing" badge)	A charged order that is not in Command Center shows in a red box on Orders with "Bring into Command Center"; the pay server resends failed hand-offs every 5 minutes; an hourly check (wrrapd-order-reconcile) emails ops if anything is missing or the check fails
Oct 4	Extra items not for wrapping: shopper must call Customer Service within 48 hours to arrange pickup (Terms §13 website, §14 extension)	Hub intake "Hold for pickup" emails + texts the shopper; 11:30 PM email (wrrapd-hub-exceptions) lists held items and paid orders with no retailer order #
Oct 4	Same-day refunds reverse the full charge (Helcim cannot refund an unsettled batch)	Partial refunds work after the nightly settlement
Oct 5	Wrapping pay is \$30.00 per dozen finished wraps (WrapStar and WrapRider), prorated, plus a \$15.00 bonus every 100 wrapped boxes . No hourly wrapping rate, no pace deduction. Delivery stays Amazon Flex-style (smart route, planned hours). Legal agreements name a discretionary milestone bonus (e.g. every 100 wrapped boxes) without a dollar amount	Agreements, Command Center Finance / weekly pay, and contractor apps updated. Electronic Form W-9 (IRS Rev. March 2024) is now the live onboarding step for WrapStar, WrapRider, and JoyRider

Date	Decision	Effect on this plan
Oct 5	JoyRiders and WrapRiders keep 100% of delivery tips (cash, card, or in the app), on top of route pay. Hire landings say so. Legal agreements use that rule and do not let a tip change Wrrapd's pay	Tips are not in weekly-pay math. Apply pages do not show the \$30 or \$15 figures
Oct 5	\$2.3 unit economics use a 10-12 stop Flex route. Wrap \$6.99 is an acquisition price. Flower margin is \$2.00 inside the bouquet price (not shown as an upcharge). The florist bill is paid by that bouquet price	R10 stays a watch item (free delivery as CAC)

1.3 The launch blockers (RED), in priority order

#	Blocker	Why it matters	Fix size
R1	Hub address is a USPS PO Box (PO BOX 26067, JACKSONVILLE FL 32226-6067 hard-coded in extension/src/shared/wrrapd-hub.js)	UPS, FedEx, and Amazon Logistics generally cannot deliver to a USPS PO Box . Many Amazon items, and most Best Buy / Walmart items, will refuse a PO Box or bounce. This could break most orders on day one. Decision (Oct 3): use USPS Street Addressing — 150 BUSCH DR #26067, JACKSONVILLE FL 32218 — coded in extension 3.0.12 on Oct 3. Remaining risk: Amazon Logistics drivers may still refuse a post office; prove with HUB-01/HUB-02 test shipments from every carrier, all 10 retailers.	Code done Oct 3 (3.0.12). Remaining: Chrome Web Store publish + carrier test shipments
R2 → YELLOW	Fixed in code Oct 3 (ext 3.0.13 + Command Center): the extension reads the retailer order number on each retailer's confirmation page after Pay Wrrapd; the shopper can also add it on the tracking page; Command Center Hub intake searches by packing-slip number, Wrrapd number, names, or item. Each retailer's real order-number format was researched (Amazon 3-7-7 digits, Target 15 digits, Walmart 13-15, Best Buy BBY01-..., Kohl's 10, Nordstrom 9, Sephora 11, Ulta letter + 9, LEGO T + 9, Etsy 10); the reader only acts on a "thank you for your order" page and only accepts that retailer's format. Remaining: publish 3.0.13 after Google approves 3.0.12, then confirm on one real order per retailer during dress rehearsals. Original finding: No way to match an arriving box to its Wrrapd order. Every package is addressed to "WRRAPD INC" and the extension does not capture the retailer order number or tracking number after checkout. Decision (Oct 3): no Wrrapd code on the label — match by packing slip. That makes capturing the retailer order number on each retailer's confirmation page mandatory, because the packing slip's order number is the only reliable key. Retailers that ship without a slip need a fallback (item + shopper name + expected date) and a quarantine shelf.	At the hub, Roger opens 6 identical-looking Amazon packages and cannot reliably tell whose gift is whose. Wrong gift to wrong giftee is the worst possible failure.	Medium: order-number capture for 10 retailers + intake search by order number

#	Blocker	Why it matters	Fix size
R3 → GREEN	Fixed Oct 3: private bucket <code>gs://wrrapd-proofs</code> linked to Firebase, <code>FIREBASE_STORAGE_BUCKET</code> set on Cloud Run, token download links, videos to Nearline at 30 days, recording capped near 1 Mbps. Remaining: one real photo + video upload during dress rehearsal. Original finding: Proof photos, wrap videos, and QR labels very likely fail to upload in production. Cloud Run has no <code>FIREBASE_STORAGE_BUCKET</code> / <code>GCS_BACKUP_BUCKET</code> , and Firebase is initialized without a default bucket (<code>tracking-platform/src/lib/firebase-admin.ts</code> L151-160). The code then silently returns <code>null</code> .	No chain-of-custody evidence, no delivery photo, no labels for couriers.	Small (1 env var + bucket + test)
R4 → GREEN	Fixed Oct 3: Command Center → Hub intake marks each order Received / Partly received / Damaged / Missing (note required for damaged or partial), shows who and when, and lists every order still waiting for a package. Original finding: No hub inbound "receive package" step in Command Center	We cannot see "package arrived / not arrived / damaged" per order, so we cannot catch the shopper who paid Wrrapd but never completed the retailer order.	Medium — manual sheet acceptable for beta
R5 → GREEN	Fixed Oct 3: courier/WrapRider screen has Start delivery → camera photo + GPS + "Handed to" name (required over \$100) → Mark delivered; delivered cannot be set without the photo; the wrap photo no longer marks the order delivered. Original finding: Delivery proof UI missing for the courier/WrapRider delivery step — the API exists but the courier screen only has Start / Mark delivered. Separately, the WrapStar "wrap photo" path marks the order delivered .	Wrong status sent to shoppers; no door photo; disputes become unwinnable.	Small-medium
R6 → GREEN	Fixed Oct 3: VM orders + customers back up hourly (full nightly) to <code>gs://wrrapd-ops-backups</code> ; <code>/health/backup</code> alerts if the last backup is over 3 hours old; Firestore point-in-time recovery + delete protection ON, daily backup kept 14 days. Remaining: one practice restore (DATA checklist). Original finding: Orders' system of record is JSON files on one VM with no scheduled backup (one tarball from Jun 19). Firestore has point-in-time recovery OFF and delete protection OFF , and no backup schedule.	One bad disk, a mistaken delete, or a bad deploy loses paid orders.	Small (configuration)
R7 → YELLOW	Oct 3: all three onboarding pages work on <code>apply.wrrapd.com</code> (<code>/onboarding/</code> , <code>/wraprider-onboarding/</code> , <code>/driver-onboarding/</code>), and Command Center now shows those links. Roger, one step: in SiteGround File Manager for the apply site, add <code>define('WRRAPD_WRAPSTARS_PROS_HOST', 'apply.wrrapd.com');</code> to <code>wp-config.php</code> above "That's all, stop editing" — approval emails then link to <code>apply</code> . (Alternative: make <code>pros.wrrapd.com</code> a parked domain of the <code>apply</code> site.) Original finding: pros.wrrapd.com is still "Under construction" ; <code>pros.wrrapd.com/wraprider-onboarding/</code> returns 404 .	Every approval email sends new contractors to a dead link. Not blocking Roger, blocking every hire.	Small (DNS / SiteGround)
R8 → GREEN	Florida sales tax: closed. Registered with Florida DOR, annual filer (Roger files every year), 2026 resale certificate on file. Checkout charges 7.5% on Wrrapd lines.	—	Done
R9	Insurance — none bound as of Oct 3. Holding customers' goods (bailee), driving for business, and handling payments needs coverage. Agreements conflict (WrapStar agreement says no insurance mandate; onboarding demands a \$1M general liability + inland marine certificate).	One crash or one stolen box of electronics without coverage could end the company. Now the top non-software blocker.	Broker call this week
R10 → YELLOW	Free final delivery is a launch / CAC choice , not a math error. Wrapping is \$30/dozen (\$2.50 each, prorated) plus \$15 every 100 boxes. A 10-12 stop Amazon Flex-style route is about 2 hours, about \$60 at \$30/hr, about \$5 per stop — not \$120, and not \$17-\$22 per solo drive. Wrap \$6.99 is priced for conversion. Flowers are sold at a bouquet price that already includes a \$2 internal markup (shoppers never see an "upcharge" line). See §2.3. Fine while density is being proven; revisit a delivery fee or ZIP-cluster days with beta route data.	Publishing a delivery fee too early fights acquisition. Publishing none forever after density is proven leaves money on the table.	Business decision after beta data

1.4 Important but not blocking (YELLOW, fix during beta)

- Stripe customer-side key is still **test mode** on the pay server; Helcim is the live customer processor. Stripe Connect for contractor payouts on Cloud Run **is live** (`sk_live_`). Decide: Helcim-only for customers, and remove/disable the Stripe customer checkout routes so nobody can reach a test-mode path.
- **Server does not enforce Duval ZIP at charge time** — only the browser does. Add a server check.
- **FIXED Oct 3 — \$0.99 loose-item box**: the server pricing cart now keeps item title, category, and `needs_gift_box`, so the box is charged.
- **FIXED Oct 3 — pay server lockdown**: `/create-checkout-session` prices only from the server cart (no client-total fallback); `/api/proxy-tracking-ingest` accepts only paid orders (or the internal key) and takes email/phone from the saved order; CORS allowlist (`*.wrrapd.com`, the 10 retailers, the extension); per-IP rate limits (payment routes 20 per 10 minutes); nginx now passes the real shopper IP.
- **FIXED Oct 3 — refunds**: Command Center order page → **Refund** (full or partial, reason, cannot double-refund) through Helcim, or Stripe for older orders; shopper gets a refund email; Helcim webhook endpoint verifies signatures and records dashboard refunds. **Oct 4: webhook connected in Helcim (`https://api.wrrapd.com/api/payment-events`)**, **verifier token installed, signed test accepted and forged test rejected**. SOP: `docs/REFUNDS-SOP.md`. **Roger**: add the Helcim webhook and send the verifier token (see SOP); one live \$1 charge + refund (PAY-01).
- **FIXED Oct 3 — admin logins**: Command Center → **Set up admin login**: personal email + password + authenticator-app code, logout after 8 wrong tries, codes cannot be reused. The first saved login retires the shared password (and signs out shared-password sessions). **Roger**: set yours up first. The contractor-app test seats (`admin@wrrapd.com`) still use the shared password.
- **FIXED Oct 3 — delivery messages**: shoppers get a text + email for "out for delivery" and "delivered" (with the door photo), once each; STOP opt-outs respected.
- **FIXED Oct 3 — schedulers**: `wrrapd-wrapstar-morning` (7:45 am ET daily) and `wrrapd-expire-delivery-preferences` (hourly) added next to weekly payouts.
- **FIXED Oct 3 — privacy policy**: updated for all 10 retailers, Helcim, texts/calls, proof of delivery, and Chrome Web Store Limited Use (live, "Last updated: October 3, 2026").
- **FIXED Oct 3 — monitoring + tests**: uptime checks on `wrrapd.com`, api health, pay checkout, apply, Command Center, and order-backup freshness, emailing `admin@wrrapd.com`; GitHub Actions runs pay-server tests (pricing, rate limits, Helcim webhook), Command Center type-check, and the extension build + fixture checks on every push. **Roger**: send a mobile number to add text alerts.
- **PARTLY FIXED Oct 3 — VM firewall**: remote desktop (3389) closed. SSH (22) is key-only but still open to the internet (about 2,700 bot attempts a day, all failing). **Roger**: choose "your home IP + Google IAP only" or leave key-only.
- Hire funnel: background check (Checkr) and identity (Persona) still need vendor keys. Electronic W-9 is live (no BoldSign).

1.5 Overall readiness scorecard

#	System	Readiness	Status
1	Shopper website (<code>wrrapd.com</code>)	85%	GREEN/YELLOW
2	Chrome extension — Amazon	80%	YELLOW
3	Chrome extension — 9 other retailers	55%	YELLOW
4	Payments & pricing integrity	85%	GREEN/YELLOW (live \$1 Helcim test PAY-01)
5	Pay/API server (VM)	85%	GREEN/YELLOW (backups, lockdown, refunds done Oct 3)
6	Hub & PO Box inbound logistics	55%	YELLOW (R1 carrier tests; R2 publish 3.0.13 + real-order checks)
7	Command Center — orders & allocation	85%	GREEN/YELLOW
8	Wrap operations & video proof	80%	GREEN/YELLOW (R3 fixed; prove one upload)
9	Delivery & proof of delivery	80%	GREEN/YELLOW (R5 fixed; prove on a rehearsal)

#	System	Readiness	Status
10	Customer communications & service	75%	GREEN/YELLOW
11	Contractor hiring & onboarding	65%	YELLOW (R7: one wp-config line), GREEN for Roger
12	Contractor pay, payouts, 1099	75%	YELLOW
13	Hardware, kits & supplies	10%	GREY → must exist before first hire
14	Data, media & architecture	80%	GREEN/YELLOW (R6 fixed; practice a restore)
15	Security & privacy	75%	YELLOW (Roger: admin login, SSH choice)
16	Monitoring, backup & disaster recovery	70%	YELLOW (email alerts live; add SMS)
17	Legal, insurance, tax, licensing	45%	RED (R9 insurance); sales tax registered
18	Flowers add-on	75%	YELLOW — ON for beta; live Publix prices working Oct 4, Sam's still stored (System 17)

1.6 Order flow and role workflows

Wrrapd order flow

From the retailer cart to the giftee's door

SHOPPER

SYSTEM

HUB

WRAPSTAR

DELIVERY

SHOPPER 1. Shops on Amazon or 9 other stores

Adds the gift to the cart and clicks Wrrapd gift-wrapping (Chrome extension).

SHOPPER 2. Chooses the wrap

Giftee ZIP (Duval County) · paper or design · message · flowers · accepts Terms.

SHOPPER 3. Pays Wrrapd at pay.wrrapd.com

Card charged through Helcim. The retailer ship-to is set to the Wrrapd hub.

SYSTEM 4. Order recorded and sent to Command Center

Shopper gets a thank-you email and text; ops gets a new-order email.
If the hand-off fails it is resent every 5 minutes, and an hourly check emails ops.

SHOPPER 5. Places the retailer order

The extension reads the retailer order number from the thank-you page.

SYSTEM 6. WrapStar assigned

Auto-assigned near the giftee ZIP, or shown under "Needs a WrapStar" in Orders.

HUB 7. Package arrives and is checked in

JoyRider collects from the hub / PO Box. Hub intake: match the packing-slip order #, then mark Received, Partly received, Damaged or Missing.

WRAPSTAR 8. Wraps on video

7:45 AM wrap sheet · records the wrap · prints the QR label · ready for delivery.

DELIVERY 9. Delivered to the giftee

WrapStar or JoyRider delivers on the Wrrapd date. "Out for delivery" text, door photo, then "Delivered" email and text to the shopper.

SYSTEM 10. Contractors paid

Hours from wrap shifts and deliveries · weekly payout every Thursday at 6 PM.

When something goes wrong

Charged, not in Command Center

Red banner on Orders and an hourly email.
Click "Bring into Command Center".

No WrapStar nearby

Order still shows on Orders under
"Needs a WrapStar". Assign in Allocations.

No retailer order by end of day

Red flag in Hub intake and the 11:30 PM email.
Call the shopper; refund if they did not order.

Refund

Order page → Refund (empty = full amount).
Same-day payments are reversed in full.
Shopper gets an email; order shows Refunded.

Package damaged or partly received

Hub intake with a note.
Contact the shopper before wrapping.

Package missing

Mark Missing. Shopper follows up with the
retailer; reschedule or refund the wrap.

Extra item, not for wrapping

Hub intake → Hold for pickup. Shopper gets an
email and text to call (844) 638-5484 within
48 hours. Mark Picked up or Close.

Past the scheduled day

Shows as Delinquent on Orders.
Restaff or update the status.

Daily safety net

7:45 AM wrap sheets · hourly order check ·
11:30 PM hub exceptions email · uptime alerts
to admin@wrrapd.com.

Wrrapd workflows by role

One row per role, left to right

Shopper (gifter)

- 1. Install**
Adds the Wrrapd Chrome extension.
-
- 2. Shop**
Amazon or 9 other stores. Clicks Wrrapd at the cart.
-
- 3. Choose**
Giftee ZIP, wrap, message, flowers. Accepts Terms.
-
- 4. Pay Wrrapd**
At pay.wrrapd.com. Gets a thank-you email and text.
-
- 5. Retailer order**
Places it with ship-to set to the Wrrapd hub. Order # read for us.
-
- 6. Follow along**
Tracking link, "Out for delivery" text.
-
- 7. Delivered**
Door photo and "Delivered" email + text.

"WrapStar" (gift-wrapper)

- 1. Apply**
At apply.wrrapd.com.
-
- 2. Onboard**
Agreements, W-9, payout account. Approved in Command Center.
-
- 3. Availability**
Marks the days they can wrap.
-
- 4. Morning sheet**
7:45 AM email with the day's gifts.
-
- 5. Wrap on video**
Starts the shift, records each wrap, prints the QR label.
-
- 6. Hand off**
JoyRider picks up, or the WrapStar delivers with a door photo.
-
- 7. Get paid**
Hourly, weekly payout on Thursday.

"JoyRider" (pickup and delivery driver)

- 1. Apply**
At apply.wrrapd.com.
-
- 2. Onboard**
Agreements, W-9, payout account, driver checks.
-
- 3. Availability**
Marks the days they can drive.
-
- 4. Collect**
Picks up packages at the hub / PO Box for check-in.
-
- 5. To the WrapStar**
Brings the packages to the WrapStar.
-
- 6. Deliver**
Picks up the wrapped gift, scans the QR, delivers, takes a door photo.
-
- 7. Get paid**
Hourly, weekly payout on Thursday.

"WrapRider" (collects, wraps and delivers)

- 1. Apply**
At apply.wrrapd.com.
-
- 2. Onboard**
Agreements, W-9, payout account, driver checks.
-
- 3. Availability**
Marks the days they can work.
-
- 4. Collect**
Picks up packages at the hub / PO Box.
-
- 5. Wrap on video**
Records each wrap, prints the QR label.
-
- 6. Deliver**
Delivers on the Wrrapd date and takes a door photo.
-
- 7. Get paid**
Hourly, weekly payout on Thursday.

Wrrapd ops (Command Center)

- 1. Morning check**
Orders page: clear any red or amber banners first.
-
- 2. Assign**
Allocations: pick a WrapStar and, if needed, a JoyRider.
-
- 3. Hub intake**
Check in packages, add missing order #s, hold extra items.
-
- 4. Watch the day**
Wrap progress and out-for-delivery on the Orders board.
-
- 5. Exceptions**
Refunds, damaged or missing packages, delinquent orders.
-
- 6. End of day**
11:30 PM email: no retailer order, items for pickup.
-
- 7. Thursday**
Weekly payouts run at 6 PM; check any holds.

2. Business model review

2.1 The model as built

1. Shopper installs the Chrome extension, shops normally at Amazon (or 9 other retailers), and opts in to Wrrapd at the cart.
2. Shopper enters the **giftee's ZIP**; only the 34 Duval ZIPs proceed.
3. Shopper chooses wrap (standard \$6.99, AI design +\$2.99, upload design +\$1.99), message, optional flowers (~\$17.99), and gets the \$0.99 box charge for loose items.
4. Shopper pays **Wrrapd** on pay.wrrapd.com (Helcim) and then pays the **retailer** separately, with the ship-to locked to the Wrrapd hub.
5. Retailer ships to the hub. A JoyRider (or WrapRider) collects from the PO Box/hub.
6. A WrapStar wraps on video (or the WrapRider does), prints/attaches a signed QR label.
7. JoyRider/WrapRider delivers to the giftee on the retailer date + 1 day, with a door photo.
8. Contractors: WrapStars and WrapRiders are paid **\$30.00 per dozen** finished wraps (prorated for fewer or more than a dozen; **\$15.00 bonus every 100 wrapped boxes**). No hourly wrapping rate, no pace deduction. JoyRiders and WrapRider delivery use an Amazon Flex-style planned route. Weekly Stripe Connect payouts Thursday 6 PM ET; 1099s annually. Electronic Form W-9 (IRS Rev. March 2024) is filled and signed during onboarding.

2.2 What is smart about it

- **No inventory risk.** The retailer carries the product; Wrrapd only touches it for a day.
- **Asset-light local footprint.** One PO Box/micro-hub plus home-based wrappers can cover a metro.
- **Gift-presentation premium.** Retailer gift wrap (where it exists) is poor; Wrrapd's video-documented, hand-delivered wrap is a real step up.
- **Duval-only beta** keeps the delivery radius drivable by one person.

2.3 Unit economics (rewritten Oct 5)

The Oct 3 draft treated every order as a **solo delivery** and counted wrapping labor plus a whole florist bill against a \$6.99 wrap fee. That is the wrong unit. Five facts change the picture:

1. **Wrapping pay is \$30.00 per dozen** finished wraps (\$2.50 each), **prorated** when the count is under or over a dozen. A **\$15.00 bonus** is paid each time a WrapStar or WrapRider crosses another **100** finished wraps. Clock time does not change wrapping pay.
2. **Delivery is Amazon Flex-style.** Command Center builds a **smart route** of typically **10-12 stops**. That route is one block of about **2 hours**, often less. The driver is paid for that planned block (about 5 minutes at each door, plus the drive at 25 mph), not for a separate trip per gift.
3. **JoyRiders and WrapRiders keep 100% of tips** given at delivery (cash, card, or in the app). Tips sit on top of route pay. They are not Wrrapd revenue and they are not a Wrrapd cost.
4. **The wrap fee is a customer-acquisition price.** Marketing and CAC are why \$6.99 can sit near wrapping labor. Contribution is judged on the **route**.
5. **Flowers are one bouquet price.** That price is the store price plus **\$2.00**. The shopper is not told there is an upcharge. Wrrapd keeps the \$2.00. The rest of the bouquet price pays the store. It is not a \$15-\$22 loss against the wrap fee.

What the shopper pays Wrrapd (not the retailer)

Line	Amount	Role
Standard wrap	\$6.99	Acquisition / conversion price
AI wrap design (optional)	+\$2.99	Margin
Upload wrap design (optional)	+\$1.99	Margin

Line	Amount	Role
Gift box (loose items)	\$0.99	Covers the box
Flowers (optional)	One bouquet price	Store price plus \$2.00, shown as the bouquet price. The \$2.00 is Wrrapd's.

Retailer merchandise is paid to Amazon (or the other store) separately.

Wrapping labor (contractor)

\$30.00 / 12 wraps = **\$2.50 per finished wrap**. Six wraps pay \$15.00. Twenty-four pay \$60.00. The \$15.00 bonus is separate and lands when lifetime finished wraps cross 100, 200, and so on. Clock time does not change these amounts.

Delivery labor (Amazon Flex model)

A Jacksonville smart route of **12 stops** and about **25 miles** is one block:

Piece	How it is counted	Time
At the door	12 stops × about 5 minutes	1.0 h
Driving	25 miles ÷ 25 mph	1.0 h
Planned route	door + drive, same trip	about 2.0 h, often less
Delivery pay at \$30/hr	2.0 × \$30	about \$60
Per stop	\$60 ÷ 12	about \$5

The earlier **\$120** figure was wrong. It paid **15 minutes at every stop** (12 × 15 min = 3 hours = \$90) and then **added the drive again** (1 hour = \$30), as if the driver stood at each door for a quarter hour and the miles were a second job. On a smart route the doors and the miles are the same two hours.

A tip at the door is the driver's. It is not part of the \$60.

Worked example: one 12-stop route

Assumptions, all stated:

- 12 gifts, each with standard wrap at **\$6.99**.
- 6 of those gifts include flowers. Example store price **\$15.00**. The shopper is charged **\$17.00** (the extra \$2.00 is Wrrapd's). The screen shows \$17.00, not a separate fee.
- 4 gifts are loose and get the **\$0.99** box charge.
- Delivery is the 2-hour route above, **\$60**.
- This contractor has not reached 100 finished wraps, so the **\$15** bonus is **\$0**. The bonus pays at wrap 100, 200, and so on, not on every route.
- Wrapping paper, ribbon, and tape are the contractor's. They are not a Wrrapd cost in this table.
- Card fees below are an estimate of **3% + \$0.30 per shopper charge**, on 12 separate checkouts. Helcim's live rate can differ.

What shoppers pay Wrrapd

Line	Math	Amount
Gift wrap	12 × \$6.99	\$83.88
Flowers, full price	6 × \$17.00	\$102.00
Gift box	4 × \$0.99	\$3.96
Charged to shoppers		\$189.84

Where that money goes

Line	Math	Amount
Florist (the store price inside the bouquet)	$6 \times \$15.00$	–\$90.00
Wrapping pay	$12 \times \$2.50$, which is one dozen at \$30.00	–\$30.00
100-wrap bonus	not reached (12 wraps, bonus starts at 100)	\$0.00
Delivery pay	about 2 hours $\times$ \$30/hr	–\$60.00
Card processing (estimate)	$3\% \times \$189.84 = \5.70 , plus $12 \times \$0.30 = \3.60	–\$9.30
Left on this route, before ads	$\$189.84 - \$90 - \$30 - \$60 - \$9.30$	about \$0.50

The old “Wrrapd's own lines ~\$100” label was the wrap fees (\$83.88), the flower \$2 only (\$12.00), and the boxes (\$3.96) added together, with the florist's \$90 and the shoppers' \$102 flower payments left out. That is why the row was hard to read. The table above shows every dollar the shopper paid and every dollar it pays for.

Read the result this way:

- Wrapping labor on these 12 gifts is **\$30**, not \$22–\$30 of mystery cost. The wrap fees are **\$83.88**.
- The florist's **\$90** is paid out of the **\$102** the shoppers already paid for the bouquets. Wrrapd keeps **\$12** (6 $\times$ \$2).
- Delivery on this route is **about \$60** (about **\$5 a stop**), not \$120.
- Before advertising, this example route is roughly a wash. The **\$6.99** wrap price is still the acquisition price: ads and the cost of getting the customer are not in the table. Free delivery stays a launch choice while Duval density is being proven. Contractor dollar amounts stay off wrrapd.com and the apply landings.

B. Independent-contractor classification. Piece-rate wrapping (\$30/dozen, prorated, plus a milestone bonus) is a cleaner IC factor than hourly wrapping. Delivery remains planned-hours (Flex-style). Tips are the contractor's. Video proof, availability windows, and borrowed kits still need Florida employment counsel **before the first non-founder hire**.

C. Retailer dependency. The extension automates checkout pages and rewrites ship-to addresses. Amazon can change its pages any day (fragility) or object to the practice (policy risk). The Terms already shift account risk to shoppers. Keep docs/ALTERNATIVE-EXTERNAL-FLOW.md (wrap ordered on wrrapd.com) warm as Plan B.

D. Capacity of one WrapRider. Roger alone can realistically handle about **10–15 delivery stops/day** plus one PO Box run, and roughly 30–40 wraps on a wrap-heavy day. That is one Flex-sized route, not 10–15 dedicated drives. The beta needs a **daily order cap** (see Exhibit A, station CAPCOM). Emptying the ZIP allowlist is today's only “kill switch” — it should be tested.

E. The pay-then-abandon case. A shopper can pay Wrrapd and then not finish (or cancel) the retailer order. Hub intake now flags paid orders with no retailer order number by end of day; refund SOP is live (same-day reverse). Remaining: inbound package tracking.

F. Gift privacy. Amazon gift orders hide prices, but packing slips may still contain shopper names and messages. Wrrapd staff see everything. The Code of Conduct should cover confidentiality; giftee address data must be protected.

3. System-by-system readiness review

Each system lists subsystems, current state, risks, and what must happen before launch. Item IDs (e.g., EXT-07) match the checks in Exhibit A.

System 1 — Shopper website (wrrapd.com, WordPress on SiteGround)

Subsystem	State	Notes
Homepage, header, seasonal hero, hot gifts	GREEN	Live build 2026-09-22-hire-chrome-gate / 2026-10-01-amazon-contrast
Extension install CTA (CWS link 3.0.11)	GREEN	Verify link opens the current listing
Login / register / Google / Amazon login	YELLOW	Historical fragility (MOBILE_HEADER_FIX_RUNBOOK.md); test on mobile + desktop
My Orders ([wrrapd_review_orders])	YELLOW	Reads VM JSON via internal API; test with a real claimed order
Terms (refund \$13 inside Terms)	YELLOW	No standalone refund page; consider a short FAQ link
Privacy	RED-ish	Apr 23, 2026; says Amazon-only + Stripe. Update for 10 retailers, Helcim, install heartbeat
SMS consent / e-comms / affiliate disclosure	GREEN	Pages exist
Contact / About	GREEN	Contact hub plugin
"How it works" / service area / FAQ	YELLOW	Must say plainly: Jacksonville/Duval only during beta, delivery the day after the retailer delivers
SEO/sitemap	GREEN	Sitemap MU present

System 2 — Chrome extension (3.0.13 built Oct 3 with retailer order # capture; 3.0.12 submitted Oct 3; 3.0.11 live)

Subsystem	State	Notes
Amazon cart opt-in, gift options, hub address swap, Pay Wrrapd, Place Order hook	YELLOW	Most mature; huge DOM automation surface; must be smoke-tested within 24 h of launch and daily
Multi-address / mixed carts on Amazon	YELLOW	Historically brittle; recommend telling beta shoppers "one giftee per order"
Other 9 retailers (shared flow)	YELLOW	Thin proof; only Best Buy/Kohl's fixture checks. Decision (Oct 3): all 10 live for beta → each needs a passing rehearsal order (EXT-19), packing-slip match (HUB-04), and a per-retailer off switch (EXT-20). Best Buy and Walmart are the most likely to refuse post-office addresses — test them first
Duval ZIP gate	GREEN	Allowlist API; out-of-area copy is polite
Giftee address capture	YELLOW	Amazon scrapes before swap; others collect on pay page. Verify full street + phone reach Command Center
Hub address	YELLOW (R1)	Street Addressing coded in 3.0.12; carrier tests pending
Retailer order # / tracking capture	YELLOW (R2)	Order # read on confirmation pages in 3.0.13 (not yet published); tracking # not captured
International Amazon	GREY	Permissions requested but not used — remove to simplify CWS review
Install heartbeat	GREEN	Already in background.js (the "parked" rule is out of date)

Subsystem	State	Notes
Automated tests	GREY	Two fixture scripts only

System 3 — Payments & pricing integrity

Subsystem	State	Notes
Helcim customer checkout (/api/checkout-quote → /api/helcim-purchase → /process-payment)	YELLOW	Live tokens; confirm account is approved for live settlement, payout bank, statement descriptor
Server-side repricing	YELLOW	Works when pricingCart sent; drops \$0.99 box (bug)
Stripe customer checkout routes	YELLOW	Test key; create-checkout-session trusts client total — disable or lock down
Idempotency / double charge	GREEN	Helcim idempotency key + "already processed" scan
Charged but order save failed	RED-ish	Money captured, client sees 500, no auto-refund. Need alert + SOP
Refunds	GREEN/ YELLOW	Built Oct 3: Command Center refund (Helcim / Stripe), logged on the order, shopper email, webhook; SOP docs/REFUNDS-SOP.md. Webhook connected Oct 4. Prove with PAY-01 live \$1 refund (Roger, Oct 4)
Chargebacks / disputes	GREY	Need evidence packet (wrap video, door photo, timestamps) — depends on R3/R5
Sales tax	GREEN	Registered; annual filer; 7.5% charged on Wrrapd lines
PCI scope	GREEN	Helcim.js hosted fields → minimal scope; confirm no card data in logs

System 4 — Pay/API server (wrrapd-server, PM2 on the GCP VM)

Subsystem	State	Notes
Process health	YELLOW	Online, but 153 lifetime restarts — review why
Orders persistence	GREEN/YELLOW (R6)	orders/order_*.json on local disk; hourly + nightly backup to GCS since Oct 3; atomic writes for refunds / order refs
Tracking ingest to Command Center	YELLOW	If ingest fails, order exists only on the VM. Need retry + alert
Emails	YELLOW	SMTP via mail.wrrapd.com; no giftee email (correct for surprise gifts)
Logs	YELLOW	Full order data (addresses, messages) logged to PM2 logs — trim PII
Clutter	YELLOW	server.js.backup, server-priorversion.js, temp_qr_*.png, swap files — remove
Python AI helper (wrrapd-api on :5000)	GREEN-ish	debug=True, listening on 0.0.0.0, but firewall blocks it publicly; still turn debug off
GCS_BUCKET_NAME mismatch	YELLOW	Env says wrrapd-user-designs; code uses wrrapd-media. Harmless today; confusing later
Valid addresses endpoint	GREY	Stub returning samples — make sure nothing relies on it

System 5 — Hub & PO Box inbound logistics

Subsystem	State	Notes
Receiving address accepting all carriers	RED (R1)	See §1.3 and Exhibit B Q1
Daily pickup routine	GREY	No SOP: who, when, keys, counter pickup for oversized, Sunday gaps
Package → order matching	YELLOW (R2)	Hub intake search by packing-slip #, Wrrapd #, shopper, giftee, item

Subsystem	State	Notes
Intake check-in (scan, photo, condition)	GREEN (R4)	Hub intake: received / partly / damaged / missing + note; no photo yet (wrap video covers condition)
Damage / wrong item / missing item	GREY	Agreements require reporting within 24 h; no SOP
"Expected but not arrived" report	GREY	Needed to catch abandoned retailer checkouts and carrier delays
Secure storage at micro-hub	?	Locked, climate-OK, camera? (Exhibit B)
Returns to retailer	GREY	Terms defer to retailer; need SOP for refused/undeliverable gifts

System 6 — Command Center: orders & allocation

Subsystem	State	Notes
Ingest → Firestore orders	GREEN	
Orders board, calendar, order detail	GREEN	
Auto-allocation (15 mi) + approval board	GREEN	Solo override via <code>TRACKING_SOLO_*</code> for Roger
Availability (weekly AM/PM)	GREEN	
Inventory calendar (paper / boxes / tissue forecast)	GREEN	Forecast only — no stock levels
Reports + daily CSV	GREEN	
Pricing + ZIP admin (proxies pay server)	GREEN	
Daily capacity cap / pause switch	GREY	Not built; needed for beta (CAPCOM)
Inbound package module	GREEN (R4)	/admin/intake
Admin auth	YELLOW	Shared password, no MFA, no per-person audit trail
Firestore rules / indexes	YELLOW	Server uses Admin SDK so rules are bypassed; indexes not versioned

System 7 — Wrap operations & video proof

Subsystem	State	Notes
Morning sheet email with codes (8 am)	YELLOW	Code exists; no Cloud Scheduler job found
Shift start/end, scan-to-open	GREEN	
Wrap video (MediaRecorder, live chunks, 500 MB/segment)	GREEN/YELLOW (R3)	Bucket <code>wrrapd-proofs</code> live; 720p, about 0.9 Mbps (~400 MB/hour)
QR label generation for courier	GREEN/YELLOW (R3)	Bucket live; prove one label in rehearsal
Label printing	?	Which printer? (Exhibit B)
Pace (12 gifts/hour) and pay cap	GREEN	
"Wrap photo" marks order delivered	GREEN (R5)	Fixed Oct 3: wrap photo is saved separately
Per-item barcodes / completeness scan	GREY	Documented as later; SOPs and legal already describe it — align wording or build
Live wrap viewing	GREY	Deferred (fine)

System 8 — Delivery & proof of delivery

Subsystem	State	Notes
Courier/WrapRider deliveries list, Start / Mark delivered	GREEN	
QR scan shows address, flowers, instructions	GREEN	HMAC-signed
Door photo capture in courier/WrapRider UI	GREEN (R5)	Camera + GPS + handed-to name; required before delivered
GPS on delivery	YELLOW	API exists, courier UI doesn't send it
Route planning / ordering stops	GREY	Use Google Maps multi-stop manually for beta
Gifted not home / safe drop / reattempt / refused	GREY	No SOP, no status
Signature	GREY	Not needed for beta except high-value (decide threshold)

System 9 — Customer communications & service

Subsystem	State	Notes
Thank-you email + SMS at order	GREEN	
Delivery-choice (combine vs fastest)	GREEN	
Public tracking page /track/[token]	GREEN	Shows POD photo if present (depends on R3/R5)
Out-for-delivery / delivered notification	GREY	Add before public beta — shoppers will ask "did it arrive?"
Service desk (Twilio SMS/voice/MMS)	GREEN	Verify Twilio number is A2P 10DLC registered (US carriers block unregistered business SMS)
CS playbook / macros	GREY	Write the 12 standard replies (Section 6)
Support hours promise	?	Decide and publish (shopper-friendly wording only)
Website chat (Tidio)	YELLOW	Live on wrrapd.com; answered by a person (free plan)
AI text assistant	YELLOW	Built and live Oct 3; set SUPPORT_ALERT_SMS_TO (Roger's mobile) so handoffs also text him

AI text assistant (built Oct 3, live on the Twilio line). Answers simple questions on its own (order status with tracking link, how Wrrapd works, prices shown at checkout, delivery area and timing, wrap options, flowers, extension help, contractor how-to, application next steps). Everything else — refunds, complaints, damaged/missing/late gifts, order changes, contractor pay, schedule changes, delivery problems, any unknown number asking about an order, or any reply that promises a follow-up — gets a short holding text, an alert to Roger, and a saved AI draft in the Service desk ("Use AI draft"). Code-level rules: order details only go to the shopper's own phone number; no dollar amounts; no refund/cancel language; a person replying pauses the AI on that thread for 12 hours; max 4 AI replies per thread per hour; STOP respected. Switch on/off in Service desk; "Pause AI here" per thread. Test suite: `tracking-platform/scripts/support-ai-eval.mts` (20 scripted conversations). Website chat (Tidio free plan) stays human-answered; free plan has no API to connect.

System 10 — Contractor hiring & onboarding

Subsystem	State	Notes
Apply forms (3 tracks) + fit score	GREEN	<code>apply.wrrapd.com</code> live (2026-09-23-onboarding-step-pager)
Command Center review / interview / move stream / activate	GREEN	

Subsystem	State	Notes
pros.wrrapd.com onboarding host	YELLOW (R7)	Onboarding works on apply.wrrapd.com; one wp-config line for approval emails (§1.3)
Clickwrap agreements	GREEN	Entity name "Wrrapd, Inc." vs LLC still flagged in memos — confirm
Electronic Form W-9 (IRS Rev. March 2024)	GREEN	Fill-and-sign on WrapStar, WrapRider, and JoyRider onboarding; pay server stamps the official PDF, stores it encrypted, last-four only in WordPress. BoldSign is no longer required for W-9
Background check	YELLOW	Consent captured; no vendor. For beta: run manually via a vendor account (e.g., Checkr) — drivers need an MVR
Identity	YELLOW	Selfie with ID, manual review
Insurance certificate upload	YELLOW	Requirement conflicts between agreement and onboarding
Payout setup	GREEN/ YELLOW	Stripe Connect works on Cloud Run; WordPress steps still say "later" for JoyRider/WrapRider
Sensitive documents storage (IDs, licenses, COIs)	?	Confirm they are not in a public wp-content/uploads path

System 11 — Contractor pay, payouts, 1099

Subsystem	State	Notes
Wrapping pay \$30.00 / dozen (WrapStar + WrapRider)	GREEN	Prorated. \$15.00 bonus each time finished wraps cross another 100. No pace deduction
Delivery tips (JoyRider + WrapRider)	GREEN	Contractor keeps 100%. Not in weekly-pay math. In the agreements Oct 5
Delivery rates by ZIP (JoyRider + WrapRider planned route)	YELLOW	Defaults \$30/hr planned hours (Amazon Flex-style). Set real delivery rates before first hire
Weekly pay from finished wraps + planned route	GREEN	
Manual / Automatic Thursday payouts	GREEN	Scheduler wrrapd-weekly-payouts (Thu 18:00 ET) enabled
Stripe Connect live	GREEN	Live key on Cloud Run; fund the platform balance before first payout
Holds, wallets	GREEN	
Annual statements / 1099-NEC	YELLOW	Internal statements; IRS filing still needs a filing service (e.g., Stripe 1099 or Track1099)

System 12 — Hardware, kits & supplies

State: GREY — nothing exists beyond a supplies forecast. Full program and module spec in §5. Must exist before the first non-founder contractor starts.

System 13 — Data, media & architecture

See §4 for the full analysis. Summary: two sources of truth (VM JSON + Firestore), no backups, no PITR, missing storage bucket, no video lifecycle, no bitrate cap.

System 14 — Security & privacy

Subsystem	State	Notes
Secrets	YELLOW	.env + PM2 dump; Cloud Run env vars in plain service config. Move to Secret Manager over time

Subsystem	State	Notes
Google Maps key in <code>public/checkout.html</code>	YELLOW	Normal for browser keys — restrict by HTTP referrer + API in Google Cloud console
CORS allow-all, no rate limiting, no helmet	YELLOW	Add rate limits on pay, upload, AI-generate endpoints (cost abuse)
Unauthenticated ingest proxy	YELLOW	Add shared secret
Admin auth	YELLOW	Per-person logins + MFA, or Google Identity-Aware Proxy in front of <code>/admin</code>
VM firewall	YELLOW	SSH open to 0.0.0.0/0 (IAP rule already exists — use it only); delete RDP 3389 rule
PII in logs	YELLOW	Trim
Giftee/shopper data retention	GREY	Define (e.g., delete addresses/messages 24 months after delivery)

System 15 — Monitoring, backup & disaster recovery

Subsystem	State	Notes
Uptime checks	RED	None. Add Cloud Monitoring uptime checks for <code>api.wrrapd.com/health</code> , <code>pay.wrrapd.com/checkout</code> , Cloud Run, <code>wrrapd.com</code>
Alerting	RED	None. Alert Roger by SMS/email on downtime, 5xx spikes, failed ingest, failed payouts
Error tracking	GREY	Sentry (free tier) on pay server + Command Center
VM orders backup	RED	Cron to GCS nightly (or every hour)
Firestore	RED	Turn on PITR (7 days) + delete protection + daily backup schedule
Media bucket	YELLOW	Soft delete 7 days on; no versioning, no lifecycle
Restore drill	GREY	Do one before launch
Golden rollback	GREEN	Tags exist; documented

System 16 — Legal, insurance, tax, licensing

Subsystem	State	Notes
Entity (Wrrapd, Inc. on Sunbiz, C corporation), EIN, bank	GREEN	Resale certificate on file; fix any leftover "LLC" wording
Local business tax receipts (City of Jacksonville / Duval)	?	Needed for operating in Duval
Florida sales tax registration & taxability	GREEN	Registered; annual filer; 2026 resale certificate on file
Insurance: general liability, bailee/inland marine (customer goods), hired & non-owned auto, cyber	RED (R9)	Broker
Contractor classification review	YELLOW	Before first hire (\$2.3 B)
Shopper Terms + Privacy	YELLOW	Privacy update
Patent	YELLOW	Provisional kit prepared; confirm filed before public launch (public use/disclosure starts the clock)
Trademark "Wrrapd", "WrapStar", "JoyRider", "WrapRider"	?	Consider filing

System 17 — Flowers add-on (ON for beta — decision Oct 3)

How it works (`WrrapdServer/lib/flowers/`): giftie ZIP → nearest Publix + Sam's Club → fetch bouquet prices → Grok picks 4-8 → shopper sees "Bouquet #N" at one price. That price is the store price plus **\$2.00**. The modal does not mention an upcharge. The server re-validates the chosen offer at payment. Target is paused as a floral supplier.

Audit on Oct 3 (live calls for 32218, 32256, 32207, 32250):

Check	Finding	Status
Markup	\$2.00 on every bouquet (<code>catalog.js</code> always adds <code>MARKUP</code>). Shoppers see one price. The modal does not say "upcharge"	GREEN
Live Publix prices	Old product API returns 403. Fixed Oct 4: Publix's store locator finds the real nearest store number, then that store's floral shelf prices and photos are read from <code>publix.com</code> (cached 6 h). Live for 32218, 32256, 32207, 32250, 32210, 32277	GREEN
Live Sam's Club prices	Bot wall (HTTP 412) every request, same for Walmart. Stored Member's Mark list still used	YELLOW — Publix covers every tested ZIP
Target / Big Y	Target's online catalog has no fresh-cut bouquets (artificial and LEGO only), so it stays paused. Big Y has no Florida stores	Note
What shoppers actually saw	Hard-coded backup price lists (Publix \$9.99-\$16.49, Sam's \$12.98-\$19.76) labeled as "live" , no photo disclaimer	Fixed Oct 3: now labeled <code>fallback_prices</code> with "Actual bouquets might differ slightly from the photos shown."
Backup Publix photos	Pointed at Sam's Club image URLs. Fixed Oct 4: real Publix products and photos	GREEN
Offer survives server restart	Was memory-only → "price mismatch or expired" at payment after any PM2 restart	Fixed Oct 3: offers saved to <code>data/flower-offers.json</code> (48 h)
Purchase practicality	Sam's requires a membership; Sam's at 300 Busch Dr is next to the PO Box (150 Busch Dr)	Note

Recommendation (pick one before beta): 1. Weekly price list in Command Center (recommended):

Roger enters current in-store bouquet prices + photos each week (he buys them anyway); server serves those + \$2.00. Reliable, honest, no bot walls. 2. Paid scraping proxy (residential IPs) to keep automated prices — ongoing cost, still fragile, retailer terms risk. 3. Keep stored price list (today's behavior) — prices drift; margin risk if store prices rise above the stored price.

Ops risks to cover in SOPs: perishability (buy same day as delivery), substitution rule when the exact bouquet is out of stock (equal or better, never cheaper-looking), receipt photo on the order.

4. The architecture question — "Will we hit an Uber-style wall?"

4.1 What actually happened to Uber (short version)

Uber's early pain came from **one big application writing everything into one central relational database**, at a scale of millions of trips plus a GPS ping from every driver every few seconds. The database became the bottleneck, and splitting it apart later was very expensive. The lesson is not "LAMP is bad"; it is: **don't let everything depend on one database and one server, and never put heavy files (images, video) inside the database.**

4.2 Where Wrrapd actually stands

Concern	Wrrapd today	Verdict
Is the order system LAMP?	No. WordPress (LAMP on SiteGround) holds marketing, shopper accounts, and the hire funnel. Orders live in Firestore (Google-managed, scales automatically) plus JSON files on the VM.	Good direction
Are videos/images in a database?	No. They go to Cloud Storage; the database stores a link.	Correct — this is the key decision
Volume risk in Jacksonville	Even 500 orders/day is tiny for Firestore.	Not a near-term risk
Real risk 1 — two sources of truth	Pay server writes VM JSON first, then forwards to Firestore. If forwarding fails, the two disagree.	Fix now
Real risk 2 — single VM	Pay server, order files, and AI helper on one machine; no backup.	Fix now (backups), migrate later
Real risk 3 — video upload size	No bitrate cap → roughly 1 GB per recorded hour. On a phone's cellular connection this fails or burns data plans.	Fix now (cap)
Real risk 4 — no retention policy	Videos kept forever by default.	Fix now (lifecycle)
Real risk 5 — sensitive hire documents on shared WordPress hosting	Driver licenses, ID selfies, COIs	Verify and harden
Real risk 6 — money ledger in a document database	Payouts/earnings in Firestore without transactions across collections	Acceptable for beta; move ledger to Postgres when volume grows

4.3 Media math (so the risk is sized, not feared)

Assumptions: 720p browser recording at default ~2.5 Mbps ≈ 19 MB/minute; ~5 minutes of video per gift (12 gifts/hour); one door photo ~3 MB.

Scenario	Video per day	Per month	Storage cost per month (Standard, approximate)
Beta: 15 gifts/day	~1.4 GB	~43 GB	~\$1
Holiday: 100 gifts/day	~9.5 GB	~285 GB	~\$6 (grows each month if never deleted)
Multi-city: 2,000 gifts/day	~190 GB	~5.7 TB	~\$120+ (grows each month)

With a **1 Mbps cap** (still clear for proof) and a **lifecycle** (move to Nearline at 30 days, Coldline at 90, delete at 13 months unless the order has an open dispute), storage costs stay small even at multi-city scale. The real costs are **upload bandwidth on contractors' phones** and **download (egress)** if customers stream videos — keep customer-facing video short (a 15-second "reveal" clip) and stream the full proof only to Command Center.

4.4 Target architecture by stage

Stage 1 — before public beta (Oct 5-25): 1. Make **Firestore the system of record for orders**. The pay server writes the order to Firestore (via ingest) as part of `/process-payment`, retries with backoff if it fails, and raises an alert on failure. VM JSON becomes a local journal/backup. 2. Nightly (better: hourly) `gsutil rsync` of `orders/` and `customers/` to a versioned GCS bucket. 3. Firestore: enable **PITR, delete protection, daily backup schedule** (retain 14+ days). 4. Create a dedicated media bucket (e.g., `wrrapd-proof`), set `FIREBASE_STORAGE_BUCKET` on Cloud Run, uniform access, no public listing, versioning on, lifecycle rules for `proof/` and `shift-video/`. 5. Cap `MediaRecorder` at ~1 Mbps / 720p; require Wi-Fi for full upload; keep live chunks small. 6. Server-side ZIP enforcement, box-charge fix, ingest proxy secret, rate limiting. 7. Uptime checks + alerts + Sentry.

Stage 2 — January-March 2027 (after holidays): 1. Move the pay server to **Cloud Run** (stateless, auto-restart, no single VM). Nothing local on disk. 2. **Secret Manager** for all keys. 3. Move money (earnings, payouts, refunds) to **Cloud SQL Postgres** with real transactions; keep Firestore for live operational state. 4. Daily export to **BigQuery** for reporting (orders, stops/hour, margins). 5. Per-person admin accounts with MFA / Identity-Aware Proxy.

Stage 3 — second city and beyond: 1. Event-driven order lifecycle (Pub/Sub topics: `order.paid`, `package.received`, `wrap.done`, `delivered`). 2. Media pipeline: transcode to H.264 480p/720p (Transcoder API), thumbnails, short-lived signed URLs, Cloud CDN for customer clips. 3. `cityId/hubId` on every record; per-city hub addresses, ZIP sets, rates, and capacity. 4. Contractor native apps (Capacitor shells already exist) with background upload and offline queueing.

5. Hardware & kit program + Command Center Equipment module

5.1 Decide the policy first (counsel input — see §2.3 B)

Three options, from least to most employee-like: 1. **Contractor buys from a recommended list** (Wrrapd provides only branded consumables: labels, stickers, tags). Lowest classification risk. 2. **Wrrapd sells or rents a starter kit** at cost, deducted from early payouts, owned by the contractor after N weeks. 3. **Wrrapd lends a kit** with a signed equipment agreement and a deposit, returned on deactivation.

Decision (Oct 3): option 3 — contractors borrow a Wrrapd kit and return it. Requirements that follow: a signed equipment loan acknowledgment (counsel to draft; note that supplying equipment is a factor in contractor-vs-employee tests), serialized asset tags, a return checklist and return shipping on deactivation, a lost/damaged policy, and the Command Center Equipment module (§5.3) with the return flow — all before the first non-founder contractor starts. Roger's first purchased item — a **portable Bluetooth mini thermal label printer** (AliExpress, Black Standard Set, arriving Oct 9–15) — is registered as asset #1 when it arrives.

5.2 Kit contents by role (starting proposal — validate with Roger's own setup)

Item	WrapStar	JoyRider	WrapRider	Notes
Smartphone (contractor-owned)	✓	✓	✓	Minimum OS version; camera + data
Overhead phone/camera mount or tripod	✓		✓	For the table-view wrap video
LED light (ring/panel)	✓		✓	Video quality = proof quality
Mini Bluetooth thermal label printer (model bought Oct 3; prints from a phone app)	✓		✓	Use: tag each received package and each finished gift with the Wrrapd order number (matches the packing-slip decision). Small inkless labels only — not for 4×6 shipping labels. Test fade/heat in a hot car before standardizing; keep one model fleet-wide
Labels (Wrrapd-supplied)	✓		✓	Signed QR label per box
Scissors, cutter, tape dispenser, double-sided tape	✓		✓	
Paper, tissue, ribbon, boxes	✓		✓	Supplied per policy; forecast in Inventory calendar
Branded gift tags / message cards / seal stickers	✓		✓	Wrrapd-supplied
Tamper-evident bags or seal stickers	✓	✓	✓	Chain of custody between hops
Delivery tote / crate, protective blanket		✓	✓	Prevents crushed wraps
Insulated bag		✓	✓	Only if flowers are on
Phone car mount + charger		✓	✓	
Hub/PO Box key or access card		✓	✓	Serialized and tracked

Item	WrapStar	JoyRider	WrapRider	Notes
Wrrapd ID badge / lanyard / shirt	✓	✓		Gifted trust at the door

5.3 Command Center "Equipment & Kits" module — specification

New admin route `/admin/equipment`, new Firestore collections, and a tab on each contractor detail page.

Collections - `tracking_equipment_items` — catalog: SKU, name, category (tool / consumable / access / apparel), unit cost, serialized yes/no, reorder point, supplier, photo. - `tracking_equipment_assets` — one doc per serialized unit: asset tag, serial number, status (`in_stock`, `assigned`, `in_transit`, `returned`, `lost`, `damaged`, `retired`), current holder (contractor ID + role), condition notes, purchase date. - `tracking_kit_shipments` — per shipment: contractor, kit template, line items (SKU, qty, asset tags), carrier, tracking number, shipped/delivered dates, delivery confirmation photo, contractor "received and accepted" e-acknowledgment (timestamp + IP), cost. - `tracking_supply_stock` — consumable stock by location (hub, each contractor): on hand, reserved by upcoming orders (from the Inventory forecast), reorder alerts. - `tracking_equipment_events` — immutable audit log of every assignment, shipment, return, loss.

Screens & flows 1. **Kit templates** per role (WrapStar, JoyRider, WrapRider) from §5.2. 2. **On Activate** (applications page): prompt "Ship starter kit?" → creates a shipment draft from the template. 3. **Ship**: enter carrier + tracking → status `in_transit`; contractor gets email/SMS with tracking. 4. **Receive**: contractor confirms in their app (photo of kit + checkbox), status `assigned`. Activation for live shifts can require "kit received". 5. **Replenishment**: Inventory forecast (already built) minus contractor stock → suggested supply shipment each Friday. 6. **Return on deactivation**: return label, checklist, deposit/charge-back per policy, assets back to `in_stock` or `lost`. 7. **Reports**: assets by holder, outstanding returns, cost per contractor, consumables per gift (feeds unit economics). 8. **Access control assets** (hub keys, PO Box keys): flagged high-security; loss triggers an alert and a lock change task.

Legal tie-in: equipment acknowledgment text in the contractor agreement suite (counsel to draft); no dollar amounts in public copy.

6. SOPs — what exists, what must be written before launch

Exist (docs/sop/): WrapStar live wrap; JoyRider scans & delivery; WrapRider wrap & deliver; sick coverage.

Must be written before public beta (short, one page each; Roger as first user):

#	SOP	Key contents
SOP-01	Hub/PO Box daily pickup	Times, keys, counter pickup for oversized, Sunday/holiday gaps, photo of haul
SOP-02	Package intake & matching	Photo each label + packing slip, match to Wrrapd order, mark received, quarantine unknowns
SOP-03	Damaged / wrong / missing item	Photo, notify shopper same day, retailer replacement/return path, refund rules
SOP-04	Package not arrived by expected date	Day+1 check, contact shopper, hold/refund decision
SOP-05	Shopper paid Wrrapd but retailer order never placed/cancelled	Detection, contact, refund in Helcim, mark order cancelled
SOP-06	Delivery exceptions	Gifted not home, safe-drop rules, reattempt, gated communities/apartments, refused gift, wrong address
SOP-07	High-value items	Threshold (decide), signature or hand-to-person only, no safe-drop
SOP-08	Refunds & cancellations	Who approves, Helcim steps, log on order, customer wording
SOP-09	Chargeback response	Evidence packet: order, wrap video, door photo, GPS, messages
SOP-10	Customer service macros	12 standard replies (where is my gift, change address, change message, cancel, damaged, late, refund, out of area, etc.)
SOP-11	Daily open / close (Flight Director checklist)	See Exhibit A §A.6
SOP-12	Incident response	Site down, payment down, data leak, vehicle accident, theft — who to call
SOP-13	Holiday surge	Order cutoffs, extra pickup runs, overflow storage, backup contractors
SOP-14	Returns to retailer / undeliverable gifts	Hold period, return shipping, shopper communication
SOP-15	Contractor kit shipping & returns	From §5

7. Timeline

All dates 2026 unless noted. Owners: **R** = Roger, **Eng** = engineering (agent/developer), **CPA**, **Broker**, **Counsel**.

Phase 0 — Decide (Sat Oct 3 - Sun Oct 4)

- R: answer Exhibit B questions (hub address, insurance, tax, pricing, retailers in beta).
- R: book CPA (sales tax), insurance broker, and (for later hires) Florida employment counsel.

Phase 1 — Stabilize (Mon Oct 5 - Sun Oct 11) — "close the REDs"

- Eng: R3 storage bucket + video cap + lifecycle; R6 backups + Firestore PITR/delete protection/backup schedule.
- Eng: R5 door photo + GPS in courier/WrapRider UI; stop wrap photo from setting delivered.
- Eng: R2 capture retailer order number (and tracking number where shown) at each of the 10 retailers' confirmation pages and add it to the Wrrapd order; Command Center intake search by retailer order number. (Decision Oct 3: no Wrrapd code on the label.)
- Eng: R1 hub address switched to 150 BUSCH DR #26067, JACKSONVILLE FL 32218 — extension 3.0.12 (done Oct 3; publish to the Chrome Web Store).
- Eng: per-retailer on/off switch, since all 10 retailers launch together (decision Oct 3).
- Eng: server-side ZIP check, \$0.99 box fix, ingest proxy secret, disable Stripe test customer routes.
- Eng: schedule the 8 am morning-sheet cron and expire-delivery-preferences cron.
- Eng: uptime checks + alert to Roger's phone; Sentry.
- R: `pros.wrrapd.com` pointed at hire WordPress (R7).
- R/Broker: insurance bound (R9).

Phase 2 — Dress rehearsals (Mon Oct 12 - Sun Oct 18)

- 10 real orders, bought by Roger/team with real cards, to friends at 10 different Duval ZIPs, mixed: single item, 2 items one giftee, loose item needing box, AI design, upload design, one Target, one LEGO.
- Run every step with the SOPs and the Exhibit A checklist. Log every glitch.
- Deliberately test failures: card decline, out-of-area ZIP, abandon retailer checkout after paying Wrrapd, damaged package, giftee not home, refund.
- Restore drill: restore yesterday's Firestore backup into a test database; restore VM orders from GCS.

Phase 3 — Friends & family closed beta (Mon Oct 19 - Sun Nov 1)

- 15-30 invited shoppers; cap 5 orders/day; flowers OFF; all 10 retailers that passed rehearsal (EXT-19).
- Daily 15-minute review: orders, failures, time per wrap, time per stop, cost per order.
- Privacy policy updated; how-it-works/FAQ updated with service area + timing.
- Begin recruiting 1-2 backup WrapRiders/JoyRiders (now that `pros` works).
- Fri Oct 30: **Go/No-Go poll** (Exhibit A §A.5).

Phase 4 — Public Duval beta (Mon Nov 2 →)

- Announce locally (social, neighborhood groups, local businesses). Cap starts at 10/day; raise in steps of 5 when two consecutive days run clean.
- First backup contractor trained and shadowing by Nov 15; kit shipped through the Equipment module.
- Pricing/delivery-fee decision using real data by Nov 16.

Phase 5 — Holiday peak (Fri Nov 27 - Thu Dec 24)

- Black Friday Nov 27, Cyber Monday Nov 30.
- Publish (shopper-friendly) holiday cutoff: suggest **order by Sat Dec 19** for Christmas Eve delivery when the retailer promises arrival by Tue Dec 22; tighten if data says otherwise.
- Extra PO Box/hub runs daily; overflow storage plan; second hub pickup person.

- Daily checklist (Exhibit A §A.6) every morning, no exceptions.

Phase 6 — Review & scale (Jan 4 - Mar 2027)

- Post-mortem; unit economics; Stage 2 architecture (§4.4); decide second ZIP cluster or city.
-

Exhibit A — Master Pre-Launch Checklist: "All Systems — Go/No-Go"

Modeled on a launch-control poll. Each **station** owns a system. Each line is a check with a **pass criterion**. Every check is done twice: **1st** by the person doing it, **2nd** by a different person or on a different day/device ("double-check"). A station reports **GO** only when all its checks pass twice or have a written waiver signed off by the Flight Director (Roger).

Columns: ID · Check · How to verify · Pass criterion · 1st ☐ · 2nd ☐

Stations (call signs)

Call sign	System	Station lead
FLIGHT	Overall go/no-go, waivers, abort calls	Roger
BOOSTER	Shopper website wrrapd.com	
GUIDANCE	Chrome extension	
FIDO	Payments, pricing, tax	
INCO	Pay/API server + integrations	
GROUND	Hub / PO Box / inbound	Roger
CAPCOM	Command Center orders, allocation, capacity	
WRAP	Wrap operations & video	Roger
RECOVERY	Delivery & proof of delivery	Roger
COMMS	Customer notifications & service desk	
CREW	Contractor hiring, onboarding, pay	
SUPPLY	Hardware, kits, consumables	
DATA	Data, media, backups, restore	
SECURITY	Security & privacy	
SURGEON	Monitoring & incident response	
LEGAL	Legal, insurance, tax, licensing	

A.1 BOOSTER — Shopper website

ID	Check	How to verify	Pass criterion	1st	2nd
WEB-01	Homepage loads, desktop Chrome	Incognito, cold cache	< 3 s, no console errors, correct build string in view-source	☐	☐
WEB-02	Homepage loads, iPhone Safari + Android Chrome	Real devices	Header, logo left, hamburger works, no overlap	☐	☐
WEB-03	Install CTA opens current CWS listing	Click	Listing shows 3.0.12+	☐	☐
WEB-04	CTA hidden after install	Install extension, reload	Install buttons hidden	☐	☐
WEB-05	Register / login / password reset	New email, end-to-end	Email arrives < 2 min, login works	☐	☐
WEB-06	Google + Amazon login	Real accounts	Lands logged-in, gold buttons, no plugin blue	☐	☐
WEB-07	My Orders shows a claimed order	Place test order with same email, log in	Order listed with correct status	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
WEB-08	Terms page current, refund section readable	Read	Matches actual refund practice	☐	☐
WEB-09	Privacy page updated (10 retailers, Helcim, heartbeat)	Read	"Last updated" ≥ Oct 2026; matches CWS privacy form	☐	☐
WEB-10	Service-area + timing statement visible	Read how-it-works/FAQ	Says Jacksonville/Duval only; delivered after the retailer delivers	☐	☐
WEB-11	Contact page works	Submit form + email + phone	Reaches support within 5 min	☐	☐
WEB-12	No dollar amounts for contractor pay on any public page	Search site	Zero hits	☐	☐
WEB-13	Colors: gold #f6b933, navy #0c0638, no neon/blue buttons	Visual pass	Pass	☐	☐
WEB-14	W3 cache purged after last MU deploy	View-source build marker	Matches repo WRRAPD_MU_BUILD	☐	☐
WEB-15	SSL valid on all hosts	curl -vI	Valid ≥ 30 days	☐	☐

A.2 GUIDANCE — Chrome extension

ID	Check	How to verify	Pass criterion	1st	2nd
EXT-01	CWS published version = repo manifest.json	CWS dashboard	Same version	☐	☐
EXT-02	Fresh install from CWS on a clean Chrome profile	New profile	Installs, no errors in service worker	☐	☐
EXT-03	Amazon: opt-in appears on cart	Real cart	Yes/No visible, default No	☐	☐
EXT-04	Duval ZIP accepted (test 5 ZIPs incl. 32202, 32226, 32250, 32258, 32277)	Enter ZIP	Proceeds	☐	☐
EXT-05	Out-of-area ZIP refused (32073 Clay, 32092 St. Johns, 32034 Nassau, 33602 Tampa)	Enter ZIP	Polite refusal, no payment possible	☐	☐
EXT-06	Wrap choices + prices correct (standard, AI, upload, box)	Compare with Command Center pricing	Exact match	☐	☐
EXT-07	AI design generates and saves	Generate	Image saved, appears on order	☐	☐
EXT-08	Upload design ≤ 5 MB saves	Upload	Saved, appears on order	☐	☐
EXT-09	Gift message saved exactly (emoji, apostrophes, 250 chars)	Compare in Command Center	Exact	☐	☐
EXT-10	Giftee full address + phone reach Command Center	Order detail	Complete and correct	☐	☐
EXT-11	Ship-to swapped to hub USPS Street Addressing address and locked	Each retailer's checkout page	Hub address selected and accepted (no PO Box error)	☐	☐
EXT-12	Place Order blocked until Wrrapd paid	Try to place first	Blocked with clear message	☐	☐
EXT-13	Place Order released after payment	Pay, then place	Retailer order placed	☐	☐
EXT-14	Retailer order number captured on confirmation page	Command Center order	Retailer order # present	☐	☐
EXT-15	Multi-item cart, one giftee	2 items	Both items on Wrrapd order, one delivery	☐	☐
EXT-16	Mixed cart (some wrapped, some not)	3 items, wrap 1	Only wrapped item goes to hub; others ship to shopper (or blocked by policy)	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
EXT-17	Amazon delivery date captured, Wrrapd date = +1 day	Compare	Correct, not in the past	☐	☐
EXT-18	Pickup-only / digital items refused	Add gift card / pickup item	Not offered	☐	☐
EXT-19	All 10 retailers (Amazon, Target, LEGO, Ulta, Walmart, Nordstrom, Kohl's, Sephora, Best Buy, Etsy) each repeat EXT-03 → EXT-17 with one real rehearsal order	Per retailer	Pass, or that retailer switched off until it passes	☐	☐
EXT-20	Per-retailer off switch works	Toggle one retailer	Wrrapd UI disappears on that retailer only	☐	☐
EXT-21	Kill switch works (empty allowlist or flag)	Toggle in Command Center	All ZIPs refused within 5 min; restore works	☐	☐
EXT-22	Windows build reproducible (npm run build)	Roger's Windows clone	Bundles identical to CWS zip	☐	☐
EXT-23	Daily Amazon smoke test assigned	Calendar	Owner + time set through Dec 24	☐	☐

A.3 FIDO — Payments, pricing, tax

ID	Check	How to verify	Pass criterion	1st	2nd
PAY-01	Helcim live end-to-end (never tested as of Oct 3)	Roger buys one real order with his own card, then refunds it	Charge appears, refund lands, deposit reaches the bank	☐	☐
PAY-01b	Flower price shown = price charged = store price + \$2.00	Order with flowers; compare to the store shelf	Exact	☐	☐
PAY-01c	Flower order still pays after a server restart mid-checkout	Pick bouquet → pm2 restart → pay	Payment succeeds	☐	☐
PAY-02	Statement descriptor reads "WRRAPD"	Real card statement	Recognizable name (reduces chargebacks)	☐	☐
PAY-03	Server total = shopper-displayed total (all wrap types + box + tax)	6 test carts	Exact to the cent	☐	☐
PAY-04	Tampered client total is ignored	Edit total in devtools	Server charges correct price	☐	☐
PAY-05	Out-of-area ZIP refused by the server	Direct API call	400, no charge	☐	☐
PAY-06	Card decline handled	Decline test card / low-limit card	Friendly message, no order created	☐	☐
PAY-07	Double-click Pay does not double-charge	Rapid clicks	One charge	☐	☐
PAY-08	Charge succeeded but save failed → alert	Simulate (disk full / ingest down in staging)	Roger alerted within 5 min	☐	☐
PAY-09	Refund full and partial in Helcim; logged on order	Do one each	Shopper sees refund; order marked	☐	☐
PAY-10	Stripe customer (test-mode) routes disabled or locked	Call endpoints	Refused	☐	☐
PAY-11	Sales tax: registered with Florida DOR (or tax removed)	Certificate / config	Matches CPA decision	☐	☐
PAY-12	Tax rate correct for Duval (6% + 1.5% surtax)	Checkout	7.5% on taxable lines only	☐	☐
PAY-13	No card numbers in any log	Grep logs	Zero	☐	☐
PAY-14	Receipt email shows correct amounts and support contact	Test order	Correct	☐	☐

A.4 INCO — Pay/API server & integrations

ID	Check	How to verify	Pass criterion	1st	2nd
API-01	/health OK from outside	curl https://api.wrrapd.com/health	200	☐	☐
API-02	PM2 restart cause understood; no restarts in last 7 days	pm2 describe wrrapd-server, logs	0 unexplained restarts	☐	☐
API-03	PM2 resurrects after VM reboot	Reboot in a quiet window	Both processes back online	☐	☐
API-04	Every paid order lands in Firestore	Compare VM order count vs Firestore for test week	100% match	☐	☐
API-05	Ingest retry works when Cloud Run is down	Simulate	Order arrives after recovery	☐	☐
API-06	Ingest proxy requires a secret	Call without header	401	☐	☐
API-07	Rate limiting on pay, upload, AI endpoints	Burst test	429 after limit	☐	☐
API-08	PII trimmed from logs	Read last 200 lines	No full addresses/messages	☐	☐
API-09	Stray files removed (*.backup, server-priorversion.js, temp_qr_*, swap files)	ls	Clean	☐	☐
API-10	Flask helper debug=False, bound to 127.0.0.1	Config	Pass	☐	☐
API-11	Disk space alert at 80%	Monitoring	Alert configured	☐	☐
API-12	SMTP sending: SPF, DKIM, DMARC pass for wrrapd.com	mail-tester.com	Score ≥ 9/10, not in spam (Gmail + Outlook + iCloud)	☐	☐
API-13	Twilio number A2P 10DLC registered	Twilio console	Approved campaign (Roger confirmed Oct 3)	☒	☐

A.5 GROUND — Hub / PO Box / inbound packages

ID	Check	How to verify	Pass criterion	1st	2nd
HUB-01	Receiving address accepts USPS, UPS, FedEx, Amazon Logistics, OnTrac	Send one test shipment via each	All 5 arrive	☐	☐
HUB-02	Amazon accepts the hub address for a typical gift (non-USPS item)	Amazon checkout	No "cannot ship to PO Box" error	☐	☐
HUB-03	Address in extension = verified address	Compare	Exact	☐	☐
HUB-04	Packing slip from each of the 10 retailers shows an order number that matches the captured retailer order #	One test order per retailer	10/10 match, or a written fallback for retailers without slips	☐	☐
HUB-05	Pickup schedule set (days/times, incl. Saturday) and in calendar	Calendar	Set through Dec 31	☐	☐
HUB-06	Keys/access: 2 copies, logged in Equipment module	Count	2, logged	☐	☐
HUB-07	Oversized/signature-required package procedure known	Ask post office / receiving desk	Written in SOP-01	☐	☐
HUB-08	Intake: each package photographed and matched to order within 2 h of pickup	Dry run	100% matched or quarantined	☐	☐
HUB-09	"Expected but not arrived" list reviewed daily	Command Center report / sheet	Exists and used	☐	☐
HUB-10	Held packages stored dry and secure at Roger's wrap location (the PO Box is the only hub)	Inspect	Pass; unboxing on wrap video covers custody	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
HUB-11	Damaged-on-arrival flow rehearsed	Simulate	Shopper notified same day	☐	☐
HUB-12	Holiday overflow plan (larger box / counter / second location)	Written	Pass	☐	☐

A.6 CAPCOM — Command Center orders, allocation, capacity

ID	Check	How to verify	Pass criterion	1st	2nd
CC-01	Admin login works; password not default; per-person logins or IAP	Login	Pass	☐	☐
CC-02	Test order appears on Orders board < 1 min after payment	Test	Pass	☐	☐
CC-03	Order detail shows all fields (items, wrap, design, message, giftee address, phone, retailer order #, dates)	Inspect	Complete	☐	☐
CC-04	Allocation proposes Roger (WrapRider) for every Duval ZIP	Allocations board	Correct	☐	☐
CC-05	Manual reassign works	Reassign + back	Pass	☐	☐
CC-06	Pause switch works (no daily cap — decision Oct 3)	Turn on pause	New orders refused politely within 5 min; existing orders unaffected	☐	☐
CC-07	Calendar view matches Wrrapd delivery dates	Compare	Pass	☐	☐
CC-08	Cancel order flow sets status, notifies, flags refund	Test	Pass	☐	☐
CC-09	Inventory forecast matches tomorrow's orders	Compare	Pass	☐	☐
CC-10	Daily report CSV downloads and is correct	Download	Pass	☐	☐
CC-11	Cron: 8 am morning sheet scheduled and received	Cloud Scheduler + inbox	Received at 8:00 ET	☐	☐
CC-12	Cron: expire delivery preferences scheduled	Cloud Scheduler	Enabled	☐	☐
CC-13	Cloud Run min instances ≥ 1 (no cold-start on shopper paths)	<code>gcloud run services describe</code>	Pass	☐	☐

A.7 WRAP — Wrap operations & video

ID	Check	How to verify	Pass criterion	1st	2nd
WR-01	WrapRider app login on Roger's phone (wraprider.wrrapd.com)	Login	Pass	☐	☐
WR-02	Shift start → scan code → recording begins	Do it	Pass	☐	☐
WR-03	Video uploads to the bucket and plays in Command Center	Order detail	Plays, correct order	☐	☐
WR-04	Video bitrate capped (~1 Mbps)	File size per minute	≤ ~8 MB/min	☐	☐
WR-05	Upload survives Wi-Fi drop mid-wrap	Toggle Wi-Fi	Recovers, no lost segment	☐	☐
WR-06	QR label generated and prints on the chosen printer	Print	Scannable from 30 cm	☐	☐
WR-07	Wrap photo does not set order to delivered	Check status	Status = wrapped / ready	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
WR-08	Correct gift ↔ correct label ↔ correct order (3 orders at once)	Blind check by second person	3/3 correct	☐	☐
WR-09	Quality standard photo board (what "good" looks like)	Printed at wrap table	Pass	☐	☐
WR-10	Message card printed/handwritten exactly as ordered	Compare	Exact	☐	☐
WR-11	Supplies on hand ≥ 3 days of forecast	Count	Pass	☐	☐
WR-12	Shift hours appear correctly in weekly pay	Finance	Pass	☐	☐

A.8 RECOVERY — Delivery & proof of delivery

ID	Check	How to verify	Pass criterion	1st	2nd
DEL-01	Deliveries list shows today's stops with addresses	App	Pass	☐	☐
DEL-02	QR scan on box opens correct delivery	Scan	Correct giftee	☐	☐
DEL-03	Start delivery sends "on the way" to shopper	Phone	Received	☐	☐
DEL-04	Door photo required to mark delivered	Try without photo	Blocked	☐	☐
DEL-05	Door photo + GPS + time stored and visible on tracking page	Track page	Visible	☐	☐
DEL-06	"Delivered" notification to shopper	Phone/email	Received with photo link	☐	☐
DEL-07	Giftee-not-home flow (safe drop vs reattempt) rehearsed	Simulate	Per SOP-06	☐	☐
DEL-08	Wrong address / refused flow rehearsed	Simulate	Per SOP-06	☐	☐
DEL-09	High-value rule: gift value over \$100	Test item above \$100	No safe drop; handed to an adult; photo of handoff	☐	☐
DEL-10	Vehicle: registration, insurance card, business-use coverage	Documents in car	Pass	☐	☐
DEL-11	Route plan for the day (Maps multi-stop)	Morning	Pass	☐	☐
DEL-12	Delivery hours logged correctly for pay	Finance	Pass	☐	☐

A.9 COMMS — Customer notifications & service

ID	Check	How to verify	Pass criterion	1st	2nd
CS-01	Thank-you email + SMS arrive	Test order	< 2 min, not spam	☐	☐
CS-02	Tracking link works on mobile, no login	Tap link	Pass	☐	☐
CS-03	Delivery-choice email works (two Amazon dates)	Test	Choice saved	☐	☐
CS-04	Shopper reply/text lands in Service desk	Reply to SMS	Appears in / admin/ service	☐	☐
CS-05	Inbound call routes to Roger	Call number	Rings / voicemail	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
CS-06	12 CS macros written and tested	SOP-10	Pass	☐	☐
CS-07	Gifted never receives a message that spoils the surprise	Review all templates	Pass	☐	☐
CS-08	All shopper copy short, plain, no internal terms	Read all templates	Pass	☐	☐
CS-09	Support response target set (e.g., same day)	Written	Pass	☐	☐
CS-10	AI assistant (if on): never reveals gift contents to a giftee; hands off refunds/complaints to a person	20 scripted test chats + texts	20/20 correct	☐	☐

A.10 CREW — Contractor hiring, onboarding, pay

ID	Check	How to verify	Pass criterion	1st	2nd
CR-01	pros.wrrapd.com serves onboarding (not "Under construction")	Browser	Pass	☐	☐
CR-02	Approval email links resolve for all 3 tracks	Click	No 404	☐	☐
CR-03	Apply → review → approve → onboarding → activate for a test WrapRider	End-to-end	Pass	☐	☐
CR-04	Clickwrap agreements show correct entity name	Read	Matches Sunbiz	☐	☐
CR-05	Electronic W-9 (IRS Rev. March 2024) fill-and-sign works on all 3 tracks	Test applicant	Signed filled PDF stored; last-four only in WordPress	☐	☐
CR-06	Background check + MVR process works (vendor or manual)	Test candidate	Result recorded	☐	☐
CR-07	Insurance requirement consistent across agreement, onboarding, orientation	Read	No conflict	☐	☐
CR-08	Sensitive uploads (ID, license, COI) not publicly accessible	Try direct URL logged out	Denied	☐	☐
CR-09	Delivery rates set for Duval (JoyRider / WrapRider); wrapping is \$30/dozen prorated plus \$15 every 100 wraps	Finance → Pay rates and a sample week	Dozen pay and the 100-wrap bonus both show	☐	☐
CR-10	Stripe Connect onboarding for a test contractor	Do it	Bank verified	☐	☐
CR-11	Platform Stripe balance funded for first payout	Stripe	Sufficient	☐	☐
CR-12	Weekly payout (manual mode first) pays correct amount	Test week	Exact	☐	☐
CR-13	1099 filing method chosen	Written	Pass	☐	☐
CR-14	Counsel review of IC structure completed before first non-founder shift	Memo	Done	☐	☐

A.11 SUPPLY — Hardware, kits, consumables

ID	Check	How to verify	Pass criterion	1st	2nd
SUP-01	Equipment policy decided (buy / sell-at-cost / lend)	Written	Pass	☐	☐
SUP-02	Kit templates per role finalized (from §5.2)	List	Pass	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
SUP-03	Mini label printer (asset #1) received, paired, prints a Wrrapd order number legibly; labels in stock	Print 10 test labels; leave one in a hot car for a day	Readable; 2 spare rolls minimum	☐	☐
SUP-04	Equipment & Kits module live (assets, shipments, acknowledgments)	Command Center	Pass	☐	☐
SUP-05	Roger's own kit registered as asset set #1	Module	Pass	☐	☐
SUP-06	First kit shipment rehearsed end-to-end (ship → track → receive → acknowledge)	Ship to self	Pass	☐	☐
SUP-07	Consumables reorder points set (paper, tissue, boxes, tape, labels)	Module	Pass	☐	☐
SUP-08	Supplier accounts set up with 2-day delivery	Accounts	Pass	☐	☐
SUP-09	Return-on-deactivation checklist written	SOP-15	Pass	☐	☐

A.12 DATA — Data, media, backups, restore

ID	Check	How to verify	Pass criterion	1st	2nd
DATA-01	Firestore PITR enabled	<code>gcloud firestore databases describe</code>	Enabled	☐	☐
DATA-02	Firestore delete protection enabled	Same	Enabled	☐	☐
DATA-03	Firestore daily backup schedule (≥ 14 days)	<code>gcloud firestore backups schedules list --database=wrrapd-firebase-db01</code>	Present	☐	☐
DATA-04	VM orders/ + customers/ synced to versioned GCS hourly	Bucket listing	Latest < 1 h old	☐	☐
DATA-05	Media bucket configured on Cloud Run (<code>FIREBASE_STORAGE_BUCKET</code>)	Env + upload test	Pass	☐	☐
DATA-06	Lifecycle on proof/ and shift-video/	Bucket config	Present	☐	☐
DATA-07	Bucket not publicly listable; objects only via token/signed URL	Try logged out	Denied	☐	☐
DATA-08	Restore drill: Firestore backup → test DB	Do it	Order readable	☐	☐
DATA-09	Restore drill: VM orders from GCS	Do it	Files identical	☐	☐
DATA-10	Data retention policy written (addresses, messages, videos, IDs)	Doc	Pass	☐	☐
DATA-11	Firestore indexes exported to repo	<code>firestore.indexes.json</code>	Present	☐	☐

A.13 SECURITY

ID	Check	How to verify	Pass criterion	1st	2nd
SEC-01	SSH only via IAP; <code>default-allow-ssh 0.0.0.0/0</code> removed	Firewall list	Pass	☐	☐
SEC-02	RDP 3389 rule deleted	Firewall list	Pass	☐	☐
SEC-03	Admin MFA or IAP on <code>/admin</code>	Login	Pass	☐	☐
SEC-04	Google Maps browser key restricted by referrer + API	Cloud console	Pass	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
SEC-05	No secrets in git history	Secret scan (e.g., gitleaks)	Zero	☐	☐
SEC-06	CRON_SECRET, INGEST_API_KEY, internal keys rotated if ever shared in chat/docs	Rotate	Pass	☐	☐
SEC-07	Ops API keys between WordPress and Command Center rotated and stored only server-side	Inspect	Pass	☐	☐
SEC-08	WordPress admin accounts reviewed; 2FA on admin users	WP admin	Pass	☐	☐
SEC-09	WordPress plugins updated; unused deactivated (incl. temporary AI Engine plugin)	WP admin	Pass	☐	☐
SEC-10	Billing alerts + budget caps on GCP and AI APIs (Grok, Stability)	Console	Pass	☐	☐

A.14 SURGEON — Monitoring & incident response

ID	Check	How to verify	Pass criterion	1st	2nd
MON-01	Uptime checks: api, pay, Cloud Run, wrrapd.com, apply, wraprider	Cloud Monitoring	All configured	☐	☐
MON-02	Alerts go to Roger by SMS + email	Trigger a test	Received < 5 min	☐	☐
MON-03	Error tracking (Sentry) on pay server + Command Center	Throw test error	Appears	☐	☐
MON-04	Alert on: ingest failure, payment-without-order, payout failure, cron failure	Simulate each	Alert received	☐	☐
MON-05	Incident contact sheet (Helcim, Stripe, SiteGround, Google Cloud, Twilio, insurer, tow/road)	SOP-12	Printed + phone	☐	☐
MON-06	Rollback rehearsed (golden tags; previous Cloud Run revision)	Do it	< 10 min	☐	☐

A.15 LEGAL — Legal, insurance, tax, licensing

ID	Check	How to verify	Pass criterion	1st	2nd
LEG-01	Entity active on Sunbiz (Wrrapd Inc., C corporation); "Wrrapd, Inc." everywhere — fix any "LLC"	Sunbiz + agreements	Pass	☐	☐
LEG-02	City of Jacksonville / Duval local business tax receipt	Certificate	Pass	☐	☐
LEG-03	Florida sales tax: registered or not required (CPA letter/email)	Document	Pass	☐	☐
LEG-04	General liability policy bound	Certificate	Pass	☐	☐
LEG-05	Bailee / inland marine (customer goods in our care, incl. in vehicles)	Certificate	Pass; limit ≥ highest expected gift value × max held	☐	☐
LEG-06	Hired & non-owned auto (and Roger's personal auto business-use endorsement)	Certificate	Pass	☐	☐
LEG-07	Cyber liability (customer PII, payments)	Quote/bound	Decision made	☐	☐
LEG-08	Shopper Terms reflect refund practice, service area, timing	Read	Pass	☐	☐
LEG-09	Privacy page = CWS privacy disclosures	Compare	Pass	☐	☐

ID	Check	How to verify	Pass criterion	1st	2nd
LEG-10	Patent provisional filed before public launch announcement	USPTO receipt 64/159,570, Sep 22, 2026	Pass — calendar the Sep 22, 2027 non-provisional/PCT deadline	☒	☐
LEG-11	Trademarks considered/filed	Decision	Pass	☐	☐
LEG-12	Contractor agreements reviewed by Florida counsel (before first hire)	Memo	Pass	☐	☐

A.16 Launch countdown

T-minus	Date (for Nov 2 launch)	Actions
T-30 d	Sat Oct 3	This review; decisions in Exhibit B
T-21 d	Mon Oct 12	All RED items closed or waived; dress rehearsals begin
T-14 d	Mon Oct 19	Friends & family beta opens; all stations run 1st checks
T-7 d	Mon Oct 26	All 2nd checks done; open items list ≤ 5 YELLOW
T-72 h	Fri Oct 30	Go/No-Go poll (below); freeze code (golden tag golden-beta-2026-10-30)
T-24 h	Sun Nov 1	Supplies counted; hub run done; backups verified; alerts tested
T-2 h	Mon Nov 2, 7:00 ET	Daily open checklist; Amazon smoke test; uptime green
T-0	Mon Nov 2, 9:00 ET	Announce
T+1 h	10:00 ET	First real orders inspected end-to-end in Command Center
T+24 h	Tue Nov 3	First-day review; raise or hold the daily cap
T+7 d	Mon Nov 9	Week review; pricing/delivery-fee data check

A.17 The Go/No-Go poll (read aloud, Fri Oct 30)

FLIGHT calls each station; each answers **"GO"** or **"NO-GO + reason"**.

FLIGHT: "BOOSTER?" — "GO." · "GUIDANCE?" — "GO." · "FIDO?" — "GO." · "INCO?" — "GO." · "GROUND?" — "GO." · "CAPCOM?" — "GO." · "WRAP?" — "GO." · "RECOVERY?" — "GO." · "COMMS?" — "GO." · "CREW?" — "GO." · "SUPPLY?" — "GO." · "DATA?" — "GO." · "SECURITY?" — "GO." · "SURGEON?" — "GO." · "LEGAL?" — "GO." FLIGHT: "All stations GO. We are GO for Duval beta launch."

Launch commit criteria (any one = NO-GO): 1. Any RED item open without a written waiver. 2. Fewer than 10 clean end-to-end rehearsal orders. 3. Any rehearsal where a gift went to the wrong giftee, or a package could not be matched. 4. Insurance not bound, or sales-tax status unresolved. 5. Backups or restore drill not proven. 6. No working alert to Roger's phone. 7. Hub address fails any major carrier.

Abort / scrub rules after launch (pause new orders via kill switch): - Amazon checkout flow broken (EXT smoke test fails). - Payments failing or charging wrong amounts. - Two delivery mix-ups in a week. - Unmatched packages > 1 for more than 24 hours. - Roger unavailable with no trained backup for the next day's deliveries (assumed true until the first hire — pause new orders and message affected shoppers the same day).

A.18 Daily flight checklist (every operating day, 10 minutes)

Morning (before 8:00 ET) 1. Uptime dashboard all green; no overnight alerts unresolved. 2. Amazon smoke test: cart opt-in appears, ZIP gate works (don't pay). 3. Command Center: today's deliveries, tomorrow's expected arrivals, unmatched packages = 0. 4. Morning sheet received; supplies ≥ 3 days. 5. Capacity cap set for today.

Midday 6. Hub/PO Box run → intake photos → all matched or quarantined. 7. "Expected but not arrived" list → contact shoppers as needed.

Evening 8. All delivered orders have photo + GPS + time; no order stuck in "out for delivery". 9. Service desk inbox zero (or replied with a time). 10. Refunds/cancellations logged; backups ran (DATA-04 timestamp < 1 h).

Exhibit B — Questions for Roger

Answered Oct 3, 2026: - Q1 Hub: PO Box with **USPS Street Addressing** — 150 Busch Dr #26067, Jacksonville FL 32218 (in extension 3.0.12). - Q2 Label code: **No** — match by packing slip (retailer order number capture becomes mandatory). - Q3 Sales tax: **Registered** with Florida DOR. - Q4 Insurance: **none bound yet**. - Q5 Beta retailers: **all 10**.

Answered Oct 3, 2026 (second round) — see the Decisions log in §1.2a for Q6–Q18. Q1 address: **150 BUSCH DR #26067, JACKSONVILLE FL 32218**.

Still open: - Support hours you can commit to (Q13). - Order-number format for the dummy-order cleanup.

Original question list, for reference:

1. **Hub receiving address:** Does the micro-hub have a **street address** that accepts UPS, FedEx, and Amazon deliveries? Or is it USPS PO Box only? Does that post office offer USPS "Street Addressing" for your box? (Determines R1.)
 2. **Matching packages:** Are you OK adding the Wrrapd order code to the ship-to (for example, name line "WRRAPD INC W-1234" or address line 2)? Retailers allow line 2 freely.
 3. **Sales tax:** Has a CPA confirmed whether Wrrapd's wrap service fee is taxable in Florida, and is Wrrapd registered with the Florida Department of Revenue?
 4. **Insurance:** What policies are bound today (general liability, bailee/inland marine, auto business use, cyber)?
 5. **Beta retailers:** Amazon only, or Amazon + Target + LEGO, or all 10?
 6. **Entity:** Wrrapd, Inc. or LLC on Sunbiz? Is there a Jacksonville local business tax receipt?
 7. **Delivery pricing:** Stay "free final delivery" for beta and decide with data in mid-November, or add a delivery fee now?
 8. **Daily capacity:** Your realistic stops per day and wraps per day (to set the cap).
 9. **Flowers:** OK to turn flowers off for the public beta?
 10. **Label printer:** Which printer/labels do you use today?
 11. **Equipment policy:** Contractors buy their own tools, buy a kit at cost, or borrow a Wrrapd kit?
 12. **The 209 orders on the VM** (Dec 2025 – Sep 2026): are any of these real customers, or all test? (Affects cleanup and backfill to Firestore.)
 13. **Customer support hours** you can commit to during beta.
 14. **High-value threshold** for no-safe-drop / hand-to-person (e.g., anything over a set amount).
 15. **Patent:** Has the provisional been filed? (Public launch starts disclosure timing.)
 16. **Backup person:** Who covers deliveries if you're sick on a delivery day before your first hire?
 17. **Micro-hub:** Is it locked, insured, camera-covered, and who else has access?
 18. **Helcim:** Is the account fully approved for live settlement with funds reaching the bank?
-

Exhibit C — Evidence captured on Oct 3, 2026

Check	Result
